

CMX300V2

The DOCSIS 1.1 compliant CMX300V2 is specially designed to work with all existing DOCSIS 1.0/1.1 compliant head-end equipment (CMTS) and Multiple Service Operator (MSO) networks. The CMX300V2 can offer superior performance & competitive pricing while providing fast, reliable & stable data transmission.

With advanced initialization algorithms and signal acquisition technology the CMX300V2 reduces service activation to within seconds of power-up. The CMX300V2 can also provide advanced remote and local diagnostics to allow cable operators to quickly and accurately pinpoint problems.

- * Ethernet or USB Interface for easy installation
- * LAN disable button to provide PC data security
- * QoS enhancement
- * MSO SNMP remote network management
- * Field software upgradeable by MSO
- * Supports up to 15 networked clients
- * Vertical footprint for better heat dissipation

Please be sure to consider the following important factors to ensure usability of this product:

- * Call your cable operator to verify DOCSIS standard cable modem service is available at your location.
- * You must currently subscribe to cable, or have access to cable service.
- * Your computer must have an USB or Ethernet port.
